Web Development Projects

The Money Train

- Stock application that notifies a user via text when their stock reaches their desired purchase or sale price point. App compares desired price point against live price every 10 minutes
- Software used:
 - IEX Trading API, to show the live price and key financial statistics of stocks
 - Heroku scheduler task, to compare stock prices
 - Twilio, to send notifications to user via text message
 - News API, to display the latest news article about each individual stock
 - Rails, to build the application
 - Heroku, to deploy the application live

Pokedex

- Simulates a Pokedex device by returning any Pokemon the user types into the console
- Software used:
 - JavaScript, to make AJAX requests to the PokeAPI to retrieve information
 - JSON, to parse information from the PokeAPI
 - CSS and Bootstrap, for application stylizing
 - Github, to deploy the application

Experience

Samuel Field Y

2015 – 2018
